

# Roll to Win

## Roll to Win

Objective: Practice addition and subtraction of integers

Materials: Game board

Two dice labeled:

Addition – White die: 2, 3, 4, 5, 6, 7

Red die: -1, -2, -3, -4, -5, -6

Subtraction - White die: -3, -2, -1, 1, 2, 3

Red die: -4, -3, -2, -1, 1, 2

Each player takes turns rolling the dice. For addition, the player finds the sum of the two dice. If the sum is a positive number, the pawn is moved forward that number of spaces. If the sum is a negative number, the pawn is moved backward that number of spaces. If there are not enough spaces to move backwards, the pawn remains on the “start” space.

For subtraction, the player subtracts the red die from the white die (white die – red die). The same positive number/negative number procedure for addition applies for subtraction.

The first person to reach the finish position is the winner.
